

Kintetsu World Express (HK) Limited

Being one of the leading company in the global logistics industry, Kintetsu World Express (HK) Limited is a Japanese company providing comprehensive one-stop services and solutions that incorporate airfreight forwarding, ocean freight forwarding and a full-range of logistics services to provide "Optimum Distribution Solutions" to its clients on a global scale since 1969. We at KWEHK shall create new values and optimal environments through our provision of cargo logistics services in order to contribute to the development of a global community together with our clients, shareholders and employees.

Air Freight

The KWE group's one of core business is global airfreight forwarding (freight consolidation). Freight consolidation is where cargo bound for a common overseas destination is collected from multiple clients and bundled into a "Single KWE shipment". Following this, KWE as the forwarder claims to

commission an air carrier to transport that freight. Major products that KWE handles include computers, IT and electronics related products such as semiconductors, communication related products particularly those for the portable communications industry such as mobile / smart phones as well as automotive industry related products.

Sea Freight

Transport modes have become more diverse and sea freight forwarding demand has grown due to developments such as the spread of SCM and the introduction of high-speed ferries. We provided the same meticulous service by Sea as it does by air. Within this sector KWE's major role is as a "Non-vessel Operating Common Carrier (NVOCC)" that utilizes the transport services provided by ocean carriers. Freight forwarded by KWE includes a wide range of products for a variety of industries and markets, including everything from raw materials to goods-in-process and finished products. Particularly in recent times KWE, centering on China, has greatly expanded its import and export operations throughout Asia, which given their relative proximity to Japan compared with Europe and the Americas and the correspondingly short transport period makes them ideal for sea freight forwarding.

Logistics

KWE, as a part of its comprehensive freight forwarding operations or as a separate ancillary service, has recently been actively involved in providing logistics services that include interim storage before and after delivery, and distribution processing such as sorting, labeling, packaging and product inspection. In recent years KWE's clients

have been increasingly using outsourcing to rationalize distribution and reduce costs. KWE in addition to utilizing its independently developed KWE-WMS (Warehouse Management System), has also developed and manages an OMS (Order Management System) that as a 3PL (Third Party Logistics) model, allows KWE as the client's agent to perform daily management of orders received and sent. Further, through linking KWE-WMS and OMS, KWE is able to provide a uniform information management service that encompasses the entire process from orders received through to delivery to the final destination.
